**Eurodent Lab announces the unprecedented lowest remake % in
2010-2011 for UCLA patient cases**

Granada Hills, Calif., May 23rd, 2011, -- Eurodent Lab, a leading custom milling lab provider to the prestigious UCLA School of Dentistry, proudly announces our lowest remake percentage on UCLA cases in the history of working with the University. In 2010-2011, our remake was less than 0.5%, an unheard of percentage according to industry standards and historical records kept during Eurodent's tenure with the University.

Simon Avanesian, CDT, Eurodent's onsite manager, credits the low remake percentage "due to the various layers of quality assurance procedures that exist both clinically at the UCLA School of Dentistry and technically at Eurodent laboratory," and is proud of the extent to which the Eurodent team will go to satisfy their UCLA cases.

VJ Lyons, the owner of Eurodent, could not be more proud of this "team" achievement and credits all members of the faculty, most notably Drs. Ronald Mito, Richard Stevenson, William Morgan and Edmond Hewlett, for their diligence in providing a work environment in which the lab could prosper. VJ states, "The UCLA faculty go above and beyond in technical communication and constantly being open to changing and modifying techniques and procedures to achieve the unprecedented standards we rise to." He goes on to state, "Their contributions mean a lot to us and make us not only a better university lab, but a better commercial lab overall. We are very proud to be the contracted lab of the UCLA School of Dentistry."

About Eurodent Lab

Eurodent Lab and Custom Milling Center is a full service cosmetic dental lab that leads primarily by its aesthetic and technical innovation and shares a deep belief in the transforming power of a smile. We are the leading manufacturer of highly customized cosmetic dental prosthesis and are recognized as one of the leading laboratories in the fabrication of porcelain veneers, zirconia crowns and implant restorations.
